Regression Models Project - Motor Trend Data 'mtcars' Miles Per Gallon Analysis

james c walmsley

12/1/2016

I. Executive Summary:

```
## Add after completing analysis
```

II. Problem statement & questions to be answered:

```
## Assuming I work for Motor Trend, a magazine about the automobile industry. Looking at the data se
## They are interested in exploring the relationship between a set of variables and the miles per ga
## They are particularly interested in the following two questions:
        ## Q1 "Is an automatic or manual transmission better for 'mpg'"
        ## Q2 "Quantify the MPG difference between automatic and manual transmissions"
```

Grading - Criteria (remove on completion)

Did the student interpret the coefficients correctly?

Did the student do some exploratory data analyses?

Did the student fit multiple models and detail their strategy for model selection?

Did the student answer the questions of interest or detail why the question(s) is (are) not answerable?

Did the student do a residual plot and some diagnostics?

Did the student quantify the uncertainty in their conclusions and/or perform an inference correctly?

Was the report brief (about 2 pages long) for the main body of the report and no longer than 5 with supporting appendix of figures?

Did the report include an executive summary?

YES Was the report done in Rmd (knitr) with pdf output?

III. Analysis considerations outline:

```
Descriptive
Exploratory
OLS Ordinary least squares
Regression to the mean - Simple linear regression
Statistical linear regression
Residuals
Regression inference
Multivariable regression analysis
Adjustments
Residuals, variation, diagnostics
Multiple variables & model selection
GLMs
Binary GLMs
Count data
```

IV. Software environment:

```
System - session Info:
```

```
sessionInfo()
```

```
## R version 3.3.1 (2016-06-21)
## Platform: x86_64-apple-darwin13.4.0 (64-bit)
## Running under: OS X 10.11.6 (El Capitan)
##
## locale:
## [1] en_US.UTF-8/en_US.UTF-8/en_US.UTF-8/C/en_US.UTF-8/en_US.UTF-8
##
## attached base packages:
## [1] stats     graphics  grDevices utils     datasets  methods   base
##
## loaded via a namespace (and not attached):
##  [1] magrittr_1.5    formatR_1.4     tools_3.3.1     htmltools_0.3.5
##  [5] yaml_2.1.13     Rcpp_0.12.7     stringi_1.1.1   rmarkdown_1.0
##  [9] knitr_1.14      stringr_1.1.0   digest_0.6.10   evaluate_0.9
```

V. Accessing data:

```
Getting the data:
```

VI. Raw data overview:

Motor Trend 'mtcars' data set:

```
any(is.na(mtcars)); colnames(mtcars)
```

```
## [1] FALSE
```

```
##  [1] "mpg"  "cyl"  "disp" "hp"   "drat" "wt"   "qsec" "vs"   "am"   "gear"
## [11] "carb"
```

VII. Processing data:

Transformations;
1 factor variables 8:11;
2 change variable labels in columns 8 & 9;
a Note; for column header 8 = vs; variable names = V-block, & S-block;
b Note; for column header 9 = am; variable names = Automatic = A, & Manual = M;

```
##                   mpg cyl disp  hp drat    wt  qsec      vs        am
## Mazda RX4         21.0   6  160 110 3.90 2.620 16.46 V-block    Manual
## Mazda RX4 Wag     21.0   6  160 110 3.90 2.875 17.02 V-block    Manual
## Datsun 710        22.8   4  108  93 3.85 2.320 18.61 S-block    Manual
## Hornet 4 Drive    21.4   6  258 110 3.08 3.215 19.44 S-block Automatic
## Hornet Sportabout 18.7   8  360 175 3.15 3.440 17.02 V-block Automatic
## Valiant           18.1   6  225 105 2.76 3.460 20.22 S-block Automatic
##                   gear carb
## Mazda RX4            4    4
## Mazda RX4 Wag        4    4
## Datsun 710           4    1
## Hornet 4 Drive       3    1
## Hornet Sportabout    3    2
## Valiant              3    1
```

VIII. Exploratory Analysis:

See Appendix A Figures 1:4

IX. Statistical Modeling, Regression & Model Fit:

Assumptions:

```
            A Multivarite intercorrelation exists
            B
            C
    Simple Linear Regression
```

```
rm(list = ls()); data("mtcars")
fslrm <- lm(mpg ~ factor(am), data = mtcars); fslrm
```

```
##
## Call:
## lm(formula = mpg ~ factor(am), data = mtcars)
##
## Coefficients:
## (Intercept)  factor(am)1
##      17.147        7.245
```

```
coef(summary(fslrm))
```

```
##              Estimate Std. Error   t value     Pr(>|t|)
## (Intercept) 17.147368   1.124603 15.247492 1.133983e-15
## factor(am)1  7.244939   1.764422  4.106127 2.850207e-04
```

X.Preliminary findings: quesions of interest: & interpretation of results:

```
    A
    B
    C
```

XII. Conclusions / recommendations:

```
    A
    B
    C
            1 Challenge the results ?
            2 Measures of uncertainty 'e'
```

XIII. Are there any possible viable alternative analyses?

```
    A
    B
```

XIV. Appendix A, “Visual Analysis Plots”"

Figure 1, Pairs

 # Figure 2, Histograms

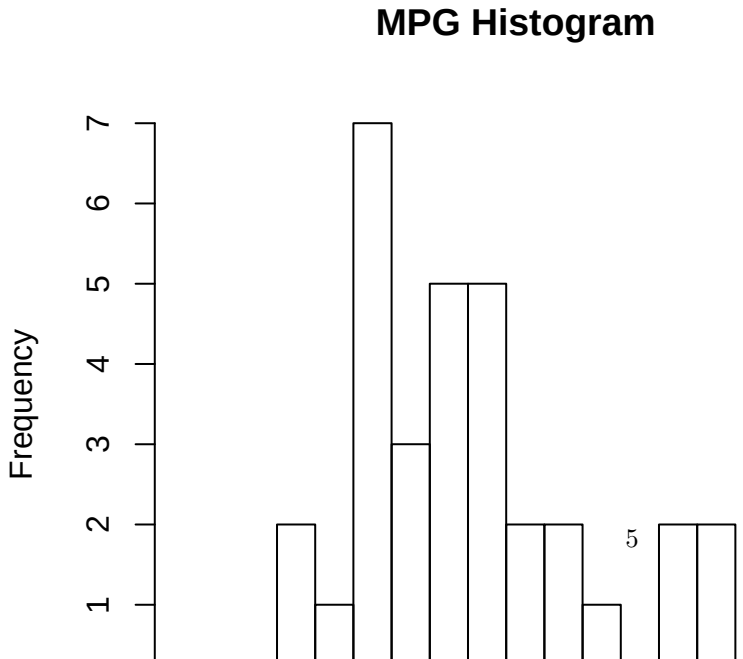

Figure 4, QQ Plot

```
    # Figure 5, Single Variable Linear Model Regression plot
```

```
##              Estimate Std. Error   t value     Pr(>|t|)
## (Intercept) 17.147368   1.124603 15.247492 1.133983e-15
## factor(am)1  7.244939   1.764422  4.106127 2.850207e-04
```
