Regression Models Project - Motor Trend Data 'mtcars' Miles Per Gallon Analysis

james c walmsley 12/1/2016

I. Executive Summary:

Add after completing analysis NOTE: include some info on cor, confint, ChisSq?, VIF

II. Problem Statement & Questions to Answer:

Q1 "Is an automatic or manual transmission better for 'mpg'" ## Q2 "Quantify the MPG difference between automatic and manual transmissions"

Grading - Criteria (remove on completion)!!!

???? Did the report include an executive summary?

???? Did the student answer the questions of interest or detail why the question(s) is (are) not answerable?

???? Did the student quantify the uncertainty in their conclusions and/or perform an inference correctly?

???? Was the report brief (about 2 pages long) for the main body of the report and no longer than 5 with supporting appendix of figures?

YES!!!! Did the student interpret the coefficients correctly?

YES!!!! Did the student do some exploratory data analyses?

YES!!!! Did the student fit multiple models and detail their strategy for model selection? Needs some more work

YES!!!! Did the student do a residual plot and some diagnostics?

YES!!!! Was the report done in Rmd (knitr) with pdf output?

III. Analysis Considerations:

Descriptive - (dim, mean, sd, sigma^2, str & summary) statistics

Exploratory - pairs, histograms, QQ, fitted, residualplots, boxplots & (multiple plots); T-Test

Analysis - OLS, simple linear regression, statistical linear regression, multivariate regression & model selection, logistic regression, pValues, adjustments, residuals, residual fit, predict fit, hatvalues, variance, & dfbetas, R^2, diagnostics; ANOVA, coeficients, confint, correlation, covariance, variance inflation

IV. Software Environment: & System - session Info:

Set the Working Directory then get System & Session Info

V. Accessing Data & Raw Data Overview: Motor Trend 'mtcars' data set:

Clean up the work space & get the data:

A data frame with 32 observations on 11 variables.

- [, 1] mpg Miles/(US) gallon
- [, 2] cyl Number of cylinders (4,6,8) [, 3] disp Displacement (cu.in.)
- [, 4] hp Gross horsepower
- [, 5] drat Rear axle ratio
- [, 6] wt Weight (1000 lbs)
- [, 7] qsec 1/4 mile time
- [, 8] vs V/S (V = vee-block, S = straight-block) [, 9] am Transmission (0 = automatic, 1 = manual)
- [,10] gear Number of forward gears (3,4,5) [,11] carb Number of carburetors (1,2,3,4,6,8)

VI. Process Data: Convert columns 2 & 8:11 (cyl=(4,6,8), vs = engine block shape (0=V, 1=S), am into transmission type (0=automatic & 1=manual), gear=(3:5) & carb=(1,2,3,4,6,8) factor levels

VII. Descriptive Statistics (view first & last three rows)

VIII. Exploratory Analysis:

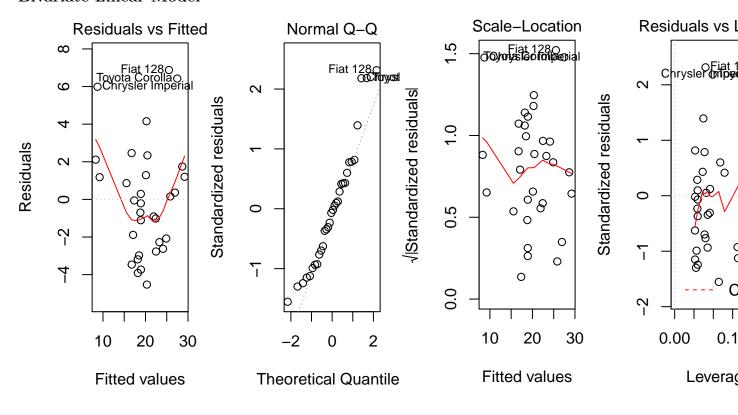

See Appendix A, Figures 1:4 Add narrative here!!

IX. Statistical Modeling, Regression & Model Fit:

Assumptions:

A A correlation to mpg ratings may exist among multiple variables

Bivariate Linear Model

Multivariate LM (all vars) Fitted Plot

Multivariate LM (all vars) Fitted & Adjusted

(Note: the variable gsec appears to be significant at this point)

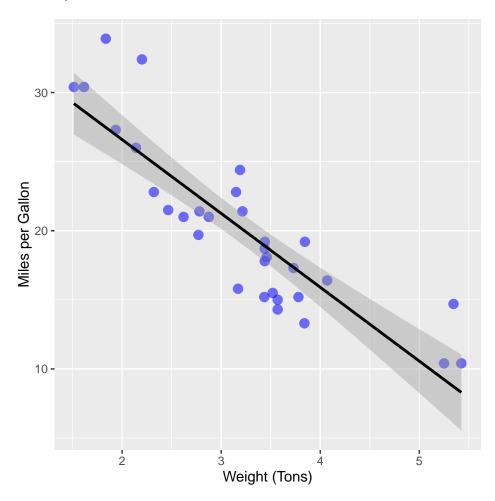

MultivariateLM(allvars)VIF(varianceInflationFactor)

(Note: at this point qsec no longer appears significant; but drat now appears to be instead, and notice the variance inflation figures of the other variables now seem to warrant removing them from the model)

Multivariate LM Nested & ANOVA table (Note: here that with the nested model approach that models 2 & 4 are indicated to be significant)

Best Fit Modeling (Note: comparing the models above and using anova table we find that models fm2 & fm4 are significant exhibiting low pValues, therefore discard two variables in model three from model four as the bestfit models)

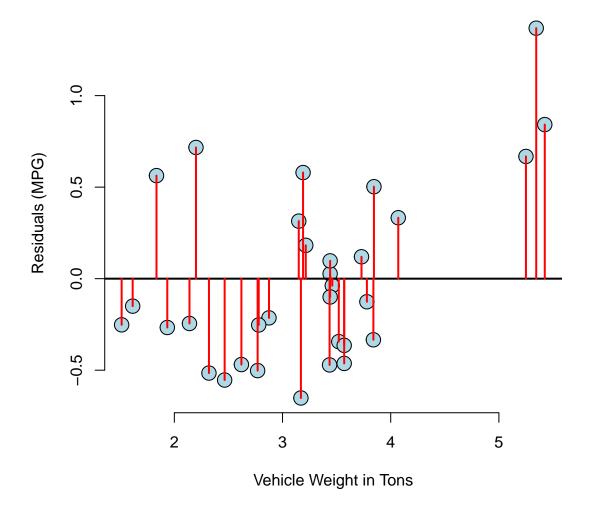

Comparing variations of the best two models from the first MVLM Nested ANOVA table we find that model fbf3 has the lowest Variance Inflation results of the possible models tested $> lm(mpg \sim factor(am) + cyl + wt, data = mtcars)$

NEXT PROCESS: the percentage of total variability explained by the linear relationship with the predictor !!!!

Find something with levels

[1] -3.184815 3.137584

X. Preliminary Findings:

Questions of Interest:

```
A What other regressors if any correlated with mpg rating and transmission type?

B
Interpretation of Results:

A Using ANOVA table with Nested Multivariate Regression fit it is clear that the variable w
B Based on the
C
```

XI. Inference:

```
Hypothesis':
    A HO = The difference between Automatic and Manual transmission MPG = 0
    B Ha = The difference between Automatic and Manual transmission MPG != 0
    C Desired confidence interval = .95 (one sided) ??
```

XII. Conclusions / Recommendations:

A B

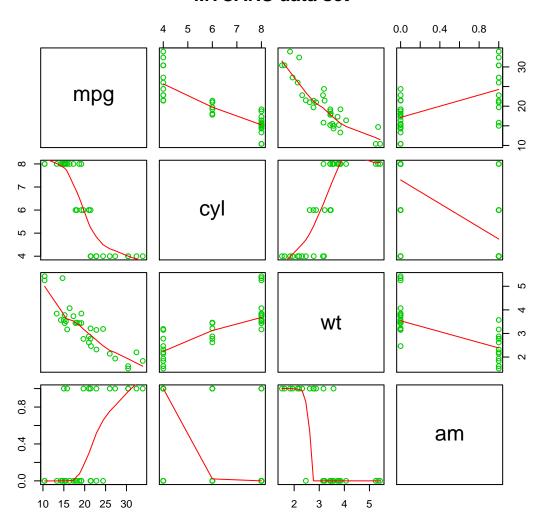

XIII. Are there other alternative analyses?

```
A VIF
B Challenge the results ?
C Measures of uncertainty 'e'
